Advantages of Off-Cycle Implementation

First Stop Health Primary Care, Urgent Care, and Mental Health run independently from the group health plan, which allows employers to implement our services any time during the year.

Here are some advantages to off-cycle implementation:

Employees and up to 7 dependents get access to providers at no cost sooner than later – enhancing benefits during the year. We look past the traditional definition of “household” and support dependents as the member defines them.

No long implementation process and First Stop Health pre-registers all employees to get them the care they need faster and easier.

Hyper-personalized, year-long employee engagement campaigns organized, implemented and funded by FSH and robust reporting to see the success of our virtual care in real time.

Access to care for seasonal health issues like allergies, cold or flu with our urgent care services. Employees also benefit from access to preventive care and better chronic care management through our primary care services.

First-day benefit that helps attract and retain employees and is available to both full- and part-time employees.

Begin saving on healthcare costs as visits does not incur claims for visits. With Primary Care, employees can prioritize their health with hands-on preventive care tactics from our doctors to decrease the risk of future high-cost claims.

Employees can complete their annual wellness exams when they're due for improved health outcomes or get support for their chronic conditions when they need it most.
